UI INTERFACE

Animated Subtitle & Typography Workflow for Adobe After Effects

DJ Subtitle is a subtitle creation and typography workflow for Adobe After Effects that lets you create, edit, manage, and animate subtitles directly inside your After Effects project.

Instead of rebuilding subtitle animations manually, you can keep your subtitle data on an After Effects layer, choose a typography style, and generate an animated subtitle composition from it.

SRT Import & Export
Import existing subtitles and export your subtitle data as SRT.

Manual Subtitle Creation
Add, edit, navigate, and delete subtitles directly in After Effects.

Marker-Based Workflow
Store subtitle text and timing on an After Effects layer.

One-Click Typography Generation
Generate animated subtitle compositions from your subtitle data.

Editable Results
Customize individual subtitles, fonts, positions, effects, and animations.

Global Style Controls
Adjust colors, typography, animation, and other available settings.

Easy Revisions
Update your subtitles and regenerate the composition without rebuilding everything manually.

Getting Started

1- Open the included After Effects project.

2- Run the DJ Subtitle script via **File** > **Scripts** > **Run Script File**.

3- Create a composition and import your audio.

4- Import an SRT file or create subtitles manually.

5- Select the subtitle data layer and choose your typography settings.

6- Click 

to generate your composition.

Edit & Regenerate

DJ Subtitle keeps your subtitle data separate from the generated typography. Correct text, adjust timing, add or remove subtitles, and regenerate your composition whenever needed.

Generated compositions remain editable in After Effects, allowing further customization of individual subtitles and animation details.

Subtitle Data & Timing

Each subtitle is stored as a marker on an After Effects layer. Marker content holds the subtitle information, while marker duration defines its timing.

Your subtitle data stays inside the project, ready for future editing and regeneration.
